

# Maya Sen

Frontend Developer | Synthetic testing profile

maya.sen@example.com | Portfolio and GitHub: not supplied

DEMO ONLY - All names, employers, education and project results below are fictional.

## SUMMARY

Frontend developer with six months of internship experience building responsive React interfaces. Focused on accessible HTML, maintainable CSS and clear user journeys.

## TECHNICAL SKILLS

HTML5, CSS3, JavaScript (ES6), React, Git, responsive layouts, accessibility. Familiarity: TypeScript, Figma, visual design and creative ideation.

## PROJECTS

### StudySpace - React study planner | March 2026 - May 2026

- Built reusable React components for tasks, weekly schedules and progress views. Used JavaScript array operations, controlled forms and localStorage to persist study plans.
- Wrote semantic HTML with labelled inputs and keyboard-operable dialogs. Used CSS Grid and media queries to support 375px mobile and 1280px desktop layouts.
- Implemented empty states and inline validation; wrote 12 component tests covering task creation, editing and invalid dates.

### MarketLane - Product catalogue interface | January 2026 - February 2026

- Created a React catalogue with JavaScript search, category filters and a cart summary. Implemented loading and error states for a mocked product API.
- Styled product cards with CSS Flexbox, consistent spacing and responsive image sizing. Documented component usage in a README.

## EXPERIENCE

### Frontend Development Intern - DemoCraft Studio (fictional) | January 2026 - June 2026

- Converted supplied page mockups into React components and responsive HTML/CSS. Used Git branches and pull requests for review.
- Fixed keyboard-focus and form-label issues after teammate review; documented changes and handed off tested components.

## EDUCATION

### BSc Computer Science - Example Institute (fictional) | 2023 - 2026

Coursework: web development, human-computer interaction and software testing.
